Indexes

This parts catalog is arranged for easy identification of genuine Case Service Parts. An alphabetical index is provided at the front of the catalog to locate major groups or assemblies. A numerical index at the rear of the catalog gives part numbers and the page on which they are described.

Illustrations

All parts are illustrated and numbered in exploded views which show the individual parts in their normal relationship with each other. The numbers correspond to numbers in the Reference column and are followed by the part number, description and quantity required.

Orders

Orders should specify correct part number, full description, quantity required, machine model and engine model, machine and engine serial numbers, method of shipment and shipping address.

Changes

When changes to the machine are made, revised pages for this catalog will be issued which are to be inserted into your catalog.

Failure to insert the revision pages as soon as they are received will lead to confusion and defeat the purpose of the book.

Indented Description

Indented parts in the description list are a part of the preceding assembly or subassembly. Quantity shown in the Required column is the number of parts used on a machine except where parts are indented in descriptive list. Quantities shown here are the number required in that particular assembly or subassembly.
